Inhalt

At the core of the seminar stands the contribution of policy analysis to urban research. The focus is in particular on theories, concepts and approaches of critical-interpretive policy analysis, on the way they have influenced urban policy and planning research, and on their role in planning theoretical debate.

Against this background, the development of theories and research approaches to urban studies and planning theory as well as new perspectives of research on urban politics are analyzed. As a result, a range of thematic subjects for students' individual research, including e.g.:

- theories of urban politics and related research paradigms;
- theories of power in urban politics and their relevance for planning theory;
- theories of governance and their influence on planning;
- theories of conflict and their relevance for planning theory;
- theories of urban social movements and their relevance for planning theory.

The course consists of:

- lectures devoted to introducing the themes of the course, possibly including thematic guest-lectures;
- colloquia, during which selected themes of the course are jointly discussed on the basis of the literature;
- thematic seminars for the presentation and discussion of students' assignments.

Assessment and grading according to module description.

For participants of Specialisation V, the rules of Module MA9 apply.

Active participation to course activities is required.
Bemerkung

A detailed description of the course including schedule, literature and course requirements is made available on the website of the Chair of Planning Theory before the start of the semester.
